

DTA

Water additive to stop excess water pick up in ink

Product Overview

DTA stops excess water pick-up in ink, keeping color dense! The use of DTA allows a stable ink/water balance to be achieved at lower ink and water settings. When used in conjunction any fountain solution at 1 ounce per gallon of mixed fountain solution, DTA stabilizes the water pick-up of the ink allowing the running of polyester and metal plates with the same fountain solution. This means a cleaner and faster start-up, less ink breakdown and less ink build-up on metering roller and blankets. This product enables polyester and metal plates to roll up faster and run cleaner, with less chance of ink over-emulsification.

Product Benefits

- Stops excess water pick-up in ink, eliminating over-emulsification
- Denser lay of ink.
- Allows both polyester and metal plates to be run using same fount.
- Eliminates tinting or build-up of ink on metering roller or blankets
- More salable sheets, faster start-up.
-

Recommendations for Use

Dosage - Normally between 1 and 2oz/gl. We recommend starting at one ounce per gallon of mixed fountain solution. First add fountain solution concentrate to water then add **DTA**. If more DTA is required add in increments of ½ ounce per gallon of mixed fountain solution
