HYDRO DYNE

Alcohol Replacement Additive

Product Overview

Hydro Dyne is geared towards the users of Ultra Violet ink.

It is a non E.B. (Ethylene Glycol Mono Butyl Ether) containing replacement for alcohol. Although E.B. (Ethylene Glycol Mono Butyl Ether) is used in many other alcohol replacements, it is also used as a good portion of UV Wash and therefore can attack UV inks.

Hydro Dyne will reduce the water's surface tension to the low 30s and because it does not contain any E.B., it has less of a tendency to attack and emulsify inks.

Product Benefits

- Excellent for users of Ultra Violet Inks.
- Usable with any fountain solution.
- Reduces surface tension to low 30s
- Reduces or eliminates blanket piling.
- Allows a wider altitude of wetting.
- For use on sheet-fed or web equipment.

Recommendations for Use

Dosage:- to replace alcohol - add 2 ½ to 3 ounces per gallon of mixed fountain solution. If more wetting is needed add more Hydro Dyne in increments of ½ ounce per gallon of mixed fountain solution.
