HYDROMATIC

Alcohol Replacement Additive

Product Overview

When added to mixed fountain Solution, Hydromatic reduces surface tension to the low 30s and creates extra viscosity within the water. It is the viscosity that ensures performance as press speeds go faster and longer.

Hydromatic is recommended when other alcohol replacements cannot keep the plate background wet and clean while maintaining low water settings during press runs. Use Hydromatic when extra viscosity is needed.

Product Benefits

- Provides extra viscosity within the water
- Keeps providing the wetness others don't
- Reduces surface tension to the low 30s
- Reduces or eliminates blanket piling.
- Allows a wider altitude of wetting
- For use on sheet-fed or web equipment
- Usable with any fountain solution

Recommendations for Use

Dosage:- add 3 ounces per gallon of mixed fountain solution. If more wetting is needed add more Hydromatic in increments of 1/2 ounce per gallon of mixed fountain solution.
