PRESS CONTROL EW

Fountain solution / alcohol replacement

Product Overview

Press Control EW builds good water viscosity to keep the plate background wet, while providing a low dynamic surface tension to reduce water settings. It contains humectants to prevent premature drying of the printing plate during brief shut downs and preserve the film-forming properties of the product.

With a balanced blend of the appropriate acid/salt combination, **Press Control EW** provides a stable pH in all waters with little or no drift. Biocides keep the fount system free of mold; sequestrants counteract the effects of dissolved calcium; corrosion inhibitors protect the printing plate and press equipment; anti-foaming agents reduce or remove mechanical and chemical foam.

Product Benefits

- Use as a fountain solution and alcohol replacement.
- For use on all plates (conventional, CTP, violet, and polyester).
- Keeps reverses, screens, and halftones sharp.
- For use on sheetfed and web presses.

Recommendations for Use

As an alcohol replacement fountain solution: start with a dosage of 5 ounces per gallon of water. If a high dosage is required, it may indicate the need for the hard water version of **Press Control**.
