PSG

Brown asphaltum plate storage gum

Product Overview

PSG is a combination of solvents used to remove ink from the plate: *micro-filtered gum arabic* to protect and leave the non-image area of the plate water receptive and *asphaltum* to protect the image area and maintain ink receptivity. Asphaltum is one of the best ingredients available to guarantee that the image will stay ink receptive and protected.

The large amounts of gum arabic and asphaltum contained in the product assure a quick and clean start up after the plate is taken out of storage and washed off for use again.

Product Benefits

- Assures fewer gum streaks during start up.
- Stores plates for a few hours, few months, or a few years.
- Reduces or eliminates image blinding.
- Easy to apply; dries evenly.
- Washes off plates quickly.
- No need to buff.

Recommendations for Use

Clean plate using normal plate cleaner. Apply a liberal amount to a towel or sponge and wipe plate down, keeping the application as smooth and even as possible. Allow to dry. Plate is now protected for storage.
