PLATE ACE

Acid-based plate cleaner for CTP technology

Product Overview

As CTP plate manufacturers continue to refine plate coating technologies, the traditional plate cleaners currently in use may cause sensitivity on press. Allied **Plate Ace** is engineered to assist in resolving this issue. After extensive lab testing on the most popular CTP plates, we have proven this advanced plate cleaner formula is perfectly suited for CTP plate applications.

Plate Ace contains a greater percentage of desensitizing acids, emulsifiers, film formers, and gums than other currently available plate cleaners. We have added metal conditioners to allow the desensitizing acids to get into sensitive areas faster and be more efficient. **Plate Ace** will remove the deepest scratches and clean and condition CTP plates.

Product Benefits

- Acid base is less likely to damage today's CTP plates.
- Passed all chemical resistance tests (report available upon request).
- Contains over twice the amount of desensitizing acids compared to other plate cleaners.
- Contains a unique metal surface conditioner not found in other plate cleaners.
- Removes oxidation and scum.
- Excellent scratch remover.
- Cleans and conditions plates.
- Stable emulsion that does not separate.

Recommendations for Use

As a general plate cleaner or to remove oxidation, scum, or deep scratches: pour **Plate Ace** onto a clean sponge or shop towel. Wipe over the total plate surface, paying particular attention to any affected areas. Wet wash with water and print.
