

# RELIEF

*Remove calcium, paper coating, and surfactants from rollers and blankets*

## **Product Overview**

In recent years, calcium carbonate has become a commonly used filler in the production of alkaline papers. Unfortunately, calcium carbonate lies at the heart of many print-related problems. If not removed regularly, it forms a hard coating around the roller train causing a loss of ink/water balance. The buildup of calcium carbonate on the metering roller and blankets also negatively affects their performance. **Relief** will eliminate these problems when used as part of an ongoing preventive maintenance program.

## **Product Benefits**

- Produces immediate results due to fast-acting concentrated formula.
- Restores proper performance of rollers and blankets.
- Improves ink transfer properties by removing calcium and surfactant residues from ink rollers.
- Maintains water receptivity in the dampening system.
- Is easy to use as part of an ongoing preventive maintenance program.

## **Recommendations for Use**

**Ink rollers:** Remove ink using normal press wash. Back off the wash-up device or cleanup blade. Apply enough **Relief** to thoroughly wet the entire roller train. Allow to work in for a few minutes, adding as needed to keep the roller wet. Rinse with clean water.

**Blankets:** Apply using a sponge or saturated shop towel. Follow with a water rinse.

**Dampening system:** Remove any ink buildup with metering roller cleaner. Clean system as usual with **Relief**. Rinse with water.
