SYSTEMS CLEANER LIQUID

Press Fountain Recirculating System Cleaner

Product Overview

Fountain solution should be consistent at all times. If a build-up of ink, paper coatings or calcium occurs, the pH and conductivity of the working fountain solution will start to change, leading to dampening related problems.

Systems Cleaner is designed to clean and remove ink, paper coating, mold, and calcium from the press recirculating system. This ensures consistent quality and longer life of the fountain solution.

Product Benefits

- Cleans the entire recirculating system
- Systems Cleaner does the work, you don't
- Eliminates the need to dismantle in order to clean the system
- Helps to keep fountain solution consistent
- Easy to use, takes about 45 minutes
- No hot water needed

Recommendations for Use

Calculate approximately how much water/fountain solution is in the recirculating tank.

Add approximately 10 ounces of Systems Cleaner per gallon of water/fountain solution.

No hot water is needed. Let the Systems Cleaner recirculate for 45 minutes.

Drain dirty systems water. Flush with clean water, repeat flushing until the water stays clean.
