

Health & Safety:

Health & Safety is of paramount importance to ABC/ALLIED. The complete line of ABC/ALLIED spray powders, are suitable for use in the food packaging in accordance with the food additives amendment. The powders are manufactured from non-modified food starches used in the food industry.

Pouring nozzle bag:

In the old days most spray powders were packed in 10 or 20 kilos boxes, resulting in spray powder flying all over the pressroom, when scooped from the box into the spray powder device, similar to this illustration. The large size packing could also cause moisture to enter the powder, causing lumping and subsequent spray nozzle blocking. With our handy pouring nozzle these problems have been eliminated, as only the required quantity of powder is poured into the receptacle of the spray powder device. After filling the spray powder device, the cap is replaced on the pouring nozzle, preventing any moisture from entering the spray powder in the bag.
