

ECO 100 SERIES PRESS WASH: Under 10% VOC Allied ECO 100 Series contains a proven and select group of vegetable and other oils compounded together. This allows for better surface area contact to provide a thorough cleaning of blanket and rollers. ECO SERIES does not contain any petroleum hydrocarbons.

AW-100 Item # 10606: For use with automatic wash up systems or by hand. AW-100 is water miscible. Forms a thin emulsion with good evaporation characteristics and less greasiness. Flash Point is greater than 200 F.

WM-100 Item# 10607: For use by hand. WM-100 is used with and without water added. With water it forms viscous emulsion for good cleaning ability. Flash Point is greater than 200 F.

UV -100 Item# 10608: A blanket and roller wash for Ultra Violet Inks. Meets all guidelines of 10% or less V.O.Cs. Flash Point is greater than 200 F.

RESOLVE-100 Item# 10609: A flush for rollers and blankets. Due to the nature of all vegetable and other oil based blanket and roller washes, we strongly recommend that RESOLVE-100 be used at least once every two days with any of the vegetable oil based washes as a general flush to insure there is no build-up of oils and surfactants within rollers or blankets. If these oils and surfactants are not periodically removed with RESOLVE-100, they can build up causing image blinding, water-logging and other issues that will effect print quality and cause unwanted down time costs.

In our opinion, warnings similar to the one below should be on any vegetable wash

WARNING! POSSIBILITY OF SPONTANEOUS COMBUSTION

Do not leave rags soaked in this material tightly balled up.

Rags soaked in any solvent present a fire hazard.

Improperly stored rags can create conditions that lead to oxidation, that may lead to spontaneous combustion.

ALWAYS STORE RAGS IN A UL LISTED APPROVED COVERED CONTAINER.
