

## H-60 WASH + H-60 Blend System

LOW COST - PREMIUM WASH - 1GL. MAKES 2.5GL. PRESS WASH

**H-60 WASH mixed with 60% water** removes inks, paper dust and coatings, lint, friction glaze, gum glaze with many other contaminants from rollers and blankets. Evaporates like a standard solvent based wash. The addition of 60% water ensures cleaner rollers and blankets with less solvent coming directly in contact with them for a longer effective life.

Use Allied H-60 Blend System with our H-60 wash (see photos last page) to automatically add and mix the required 60% water to the H-60 wash.

### H-60 BLEND SYSTEM

Choose an installation point with ready access to a water hose. The water inlet side of the blend unit is designed to connect to any common garden hose.

Following the enclosed instructions, and using the enclosed hardware, mount the blend unit firmly to an upright surface. ( See photo on last page)

Position the unit high enough to accommodate a drum of H-60 Wash and that the clear feed hose will reach the bottom of the drum.

Position the drum beneath the blend unit, connect the garden hose. Make sure the dispensing valve is in the “closed” position. Connect the blue dispensing hose to the Blend Unit outlet. Turn on the water feed. Open the drum and drop the clear feed hose through the bung hole – the hose is weighted to ensure it remains at the bottom of the drum.

Mixed, ready to use, press wash may be dispensed via the blue delivery hose by simply opening the blend valve.

You are now ready to fill the H-60 Holding Tank.
