## **“RWR” Recycled Wash Re-Generator**

Adds back needed water miscibility and corrosion inhibitors to recycled press wash

### **Product Overview**

When press wash is recycled through a typical solvent recovery unit, it can lose most or all of the essential ingredients required for water miscibility and corrosion inhibition. Use of Allied RWR will replenish the water miscibility and corrosion inhibitors. When needed, RWR will allow more water miscibility with stability, allowing the water/solvent mix to stay in solution longer. An added benefit is an overall cost reduction, the extra amount of water added is free and removes the water loving surfactants left on rollers from fountain solutions which if not removed, can cause emulsification, loss of ink/water balance and other print consistency issues. A stable water miscible wash also ensures easier removal of paper dust/debris.

### **Product Benefits**

- Made specifically for recycled/recovered wash
- Adds back water miscibility with corrosion inhibitors
- Allows a non water miscible wash to become miscible from 25%-50%, extending press wash which reduces cost.
- Ensures water can be added to press wash in a stable manner, allowing better removal of water loving surfactants left on rollers from fountain solutions and easier removal of paper dust / debris.
- RWR will help maintain consistent print quality as described above.

### **Recommendations for Use**

Easily mixes into press wash.

Add 1 gallon RWR into a 55 gallon drum of recycled wash to get water miscibility up to 25%

Add 2 gallons RWR into a 55 gallon drum of recycled wash to get water miscibility up to 50%
